**(11) *Response to Argument***

With respect to Naiman et al. '607, Applicants filed a Declaration under 37 C.F.R. 1.131 and an Expert Opinion under 37 C.F.R. 1.132. As already mentioned during the Final Office Action, mailed on January 2<sup>nd</sup>, 2003:

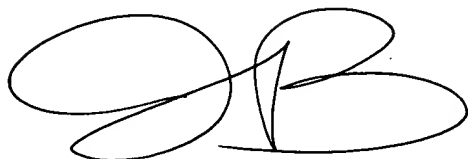

(a) The inventive entity in Naiman et al. '607 is different from the inventive entity of the present application (09/784,284) and US 6,419,491.

(b) The Declaration under 37 C.F.R. 1.131 and the Expert Opinion under 37 C.F.R. 1.132 fail to provide proof of conception and reduction to practice of the invention claimed herein prior to the effective filing date of Naiman et al. '607. The invention claimed herein is an orthopedic implant comprising an implant element having a micro-geometric, repetitive surface pattern of a multiplicity of alternating ridges and grooves with an established width of about 2 to about 25 microns, and an established depth of about 2 to about 25 microns. Said micro-geometric repetitive pattern defines a guide to promote the rate, orientation, and direction of growth of colonies of cells.

For the above reasons, it is believed that the rejections should be sustained.
